

ZIP ALERT

Vol. 5, No. 3

March 1996

Visit Our Web Site

The National Customer Support Center (NCSC) completed installation of the ZIP+4 Code Lookup System on the World Wide Web (WWW) six months ago. In this short period of time, it has proven to be the most used feature of the Postal Service's WWW site. Many customers have expressed their appreciation for the convenience of finding correct ZIP+4 Codes anytime, around the clock, without having to call or visit their local post office. Here's just a sample of what our customers are saying:

"Thank you for providing this service...I have found it very useful to be able to look up ZIP Codes at any time without having to travel to the post office."

"This is the first useful Web site I have found. Congratulations on putting in a needed postal improvement."

"Your Zip Code finder is the most useful service on the Internet!"

The WWW is the graphical section of the Internet and is easy to navigate using a "Web browser." The Postal Service's web site is located at <http://www.usps.gov>. The ZIP+4 Code Lookup System is located under the section entitled "Your Post Office." Using our standard

customer database, the system attempts to match the entered address, city, and state and returns a standardized ZIP+4-coded address and county name.

We encourage customers visiting our web site to notify the NCSC by electronic mail when they have questions about addressing problems or the responses they obtained using our ZIP+4 Code Lookup System. We promptly respond to these questions to ensure our address information is as accurate as possible. When necessary, we contact the local Address Management Systems office to correct any data problems or, in some cases, to obtain an explanation for the customer. To assist us in responding to your questions in a timely fashion, we recommend that you provide a complete address and ZIP Code whenever possible.

Help Us Help You

The North Metro Address Management Systems office in Atlanta, Georgia, is asking mailer's assistance in resolving addressing problems that are causing delayed mail and customer complaints in their district.

The Atlanta District split five ZIP Codes on July 1, 1995. Two new ZIP Codes were established as a result —30152 and 30215.

These ZIP Codes were previously assigned to Pine Log and Fayetteville, Georgia, respectively; however, both were discontinued over ten years ago. Apparently, some mailers have taken old mailing lists containing this outdated last line information and are using them instead of the new ZIP Codes.

Mailers are improperly applying the last line of Flippen, Georgia, as 30215—which is now assigned to Fayetteville, Georgia. Flippen is no longer an acceptable mailing name.

Mailers are also incorrectly using the last line of Pine Log, Georgia, as 30152, which is now assigned to Kennesaw, Georgia.

We recommend using the current City State file to avoid similar addressing problems.

Addressing for the Caribbean

In upcoming issues of *ZIP Alert*, we will be presenting some of the unusual issues associated with addressing in the Caribbean. In this issue, we focus on the *urbanization*, an address element unique to Puerto Rico and critical to the delivery of mail in that commonwealth.

Many addresses in Puerto Rico require an urbanization name for the mailpiece to be delivered. Since addresses in the United States do not need an urbanization name, many customers, mailers, and USPS employees are unfamiliar with this standard for Puerto Rican addresses.

An urbanization describes an area, sector, or development within a geographic area. It can be compared to a community or development name identifying a cluster of homes and/or businesses. In addition to being a descriptive word, it precedes the name of the area. The urbanization is commonly used in urban areas of Puerto Rico and is an extremely critical part of the addressing format because it describes the location of a given street.

Since Puerto Rican addresses usually contain repeated street names within a single ZIP Code, the urbanization is required to "break the ties" between duplicate streets.

Therefore, the urbanization name is the only element that correctly identifies the street for a particular address. For example:

MS MARY ROY
URB EL PARAISO
150 CALLE 1
SAN JUAN PR 00926-3232

SR PEDRO MARIA IBARA
ALT DEL SENORIAL
150 CALLE 1
SAN JUAN PR 00926-1822

The different urbanization names above the street addresses are the only address elements that allow address-matching software to determine the correct ZIP+4 Code. Urbanization names are, therefore, essential for postal employees to properly sort and deliver the mail.

The following is a list of words used to identify an urbanization name. In these instances, use the standard abbreviation for the word and the location name.

Word	Stand. Abbrev.
ALTURA	ALT
ALTURAS	ALTS
BARRIADA	BDA
BARRIO	BO
COLINAS	COLINAS
ESTANCIAS	EST
EXTENSION	EXT
JARDINES	JARD
MANSIONES	MANS
PARCELAS	PARC
PARQUE	PARQ
QUINTAS	QTAS
REPARTO	REPTO
TERRAZA	TERR
URBANIZATION	URB
VILLA	VILLA
VILLAS	VILLAS

Examples

MS FLAVIA DAVILA
REPTO ANIADA
14 AVENIDA DE POLLOS
SAN JUAN PR 00907-1423

MR JOSE SANCHEZ
BDA LOPEZ
91 CALLE 2
SAN JUAN PR 00927-3445

The newly revised Spanish/English ***Caribbean Addressing Directory*** is being finalized and will be available in the near future.

Address Matching System Software Now Available

The National Customer Support Center (NCSC) is now offering its Address Matching System software. This CASS-certified product allows software developers to embed address matching technology directly within their programs through the Application Program Interface (API) module. Pass an address from your software into the API, and you'll receive the address back fully standardized and ZIP+4 Coded. Use the information returned by the API to update your addresses from within your software program.

The Address Matching System is sold on an annual subscription basis and includes quarterly updates of the ZIP+4 database. API is available for the following platforms:

DOS

Windows 3.11 (16-bit)

Continued on page 3

Continued from page 2

Windows NT and 95 (32-bit)

Macintosh

OS/2

UNIX (SCO, SUN)

See the Address Matching System in action on the Internet. Our home page address is

<http://www.usps.gov>

To find out more about Address Matching System software and pricing information, contact the National Customer Support Center, CD-ROM Support Department at 1-800-331-5746.

Product Overview: Delivery Statistics

One of the most popular products extracted from the Address Management System's database is the Delivery Statistics product. Customers have discovered many uses for this product, including identifying and quantifying potential marketing targets and preparing simplified address mailings where qualified (See DMM, Module A, Section 040).

Delivery Statistic information is created by summing and categorizing all deliveries in our data file on a monthly basis. The statistics are presented for each carrier route and PO Box section within a ZIP Code.

The product provides information on possible and active deliveries, business and residential deliveries, and specific types of deliveries within a carrier route.

Possible and Active Deliveries

The possible delivery numbers include all deliveries. The active delivery numbers are possible deliveries minus vacant deliveries and addresses having mail forwarded to PO Boxes.

Business and Residential Deliveries

Any delivery determined to contain primarily business is counted as a business delivery. All others are categorized as residential deliveries.

Delivery Types

Deliveries for city, rural, and highway contract carriers are categorized as follows:

Curb—The carrier places the mail in a box located at the side of the road without leaving the vehicle.

NDCBU—Neighborhood Delivery and Collection Box Unit, also known as cluster boxes; box units, usually located on the street, serving eight to sixteen customers.

Other Central—Usually apartments, condominiums, or office buildings where mail delivery is made to groups of mailboxes at a centralized location.

Other—All other types of delivery. Generally, these deliveries are made by a carrier walking from door to door.

The delivery statistics for PO Boxes are also separated into several categories, indicating the types of facilities in which the boxes are located. Facility Boxes are located in a postal facility. Contract Boxes are located in a contract postal unit.

Detached and Non-Personnel Unit (NPU) Boxes are PO Boxes not located within a postal or contract facility.

If a route serves more than one county, the Delivery Statistics file contains a record for each county served by the carrier, with separate counts for each county.

If a carrier serves deliveries that have different preferred last lines (city names) in the database, the Delivery Statistics file contains a record for each preferred last line, with separate counts for each preferred last line.

In the future, the Delivery Statistics product will provide statistical breakdowns for each municipality delivered by a carrier. As you can see, the product provides a wealth of information to the subscriber. The complete national file contains over 613,000 records, each 219 bytes in length. The product is available in a variety of formats, including tape, cartridge, CD-ROM and hardcopy.

For more information regarding Delivery Statistics or any other postal products, contact the National Customer Support Center at 1-800-238-3150.

ZIP Code Boundary Realignments

The following ZIP Codes have lost and gained deliveries due to an adjustment of ZIP Code boundaries.

Renumbered Post Office Boxes

This file lists post office boxes that have been renumbered. The old range is the range of PO Box addresses prior to renumbering, and the new range is the range after renumbering. The box ranges may not be inclusive. If the numbering change coincided with a ZIP Code change, the newly assigned ZIP Code appears in the New ZIP column. The "Continuity" column indicates whether the renumbering was accomplished only by changing or adding leading characters. If that was the case, Y appears in the column.

OLD ZIP	NEW ZIP	OLD RANGE		NEW RANGE		CONTINUITY
		LOW	HIGH	LOW	HIGH

ADDRESS CONVERSIONS

The following is a list of ZIP Codes within which all or some of the addresses have been changed due to local government action. The Postal Service has agreed to use these new addresses as mailing addresses. Should a mailer wish to obtain the new addresses for customers in the affected ZIP Codes, they may contact the respective delivery unit, the Address Management Systems (AMS) office serving that area. Mailers who want to obtain the new converted address information electronically should first reference LACSZIP.TXT, a complete listing of ZIP Codes and record quantities for all records available on the Locatable Address Conversion System (LACS) database. LACSZIP.TXT and its counterpart LACS.TXT, a list of LACS vendors, is located in the Address Quality Menu of the Rapid Information Bulletin Board System (RIBBS) which can be accessed via our toll free number, (800) 262-9541. For additional information on LACS, contact the NCSC at (800) 238-3150.

Forwarding and Address Correction Requested

The National Customer Support Center's Product Highlight

- Provides mailers with a listing of ZIP+4 Codes that had transactions in the past twelve months
- Facilitates customer mailing list updating for automation
- Reduces production costs by eliminating annual address list reprocessing
- Allows mailers to maintain continuous qualification for automation rates*
- Enhances marketplace competitiveness by improving mail deliverability
- Available monthly or quarterly

For more information on Z4CHANGE, call the National Customer Support Center's Customer Service Department at (800) 238-3150.

*Mailers must obtain certification from the National Customer Support Center.
